

Quicksilver Air INC

Wildlife Capture Specialists

Greetings from Alaska!

We have completed another safe capture season from our Colorado base in the lower 48. And what a season it was. Quicksilver successfully captured thousands of animals in multiple states just over the past few months. Without time to rest on our laurels, we are now beginning another spring capture season in the Northern parts of our country. We thought we would recap our winter season and by popular demand keep our loyal customers updated by issuing another newsletter.

This Utah bison was no match for net gunners Chavi Florez and Toby Holland

Chavi Holds a large Colorado Rocky Mtn. Bighorn caught at 13, 500 feet.

If one thing could be said for this years winter season it would be "this is a year of records". Unlike last year's dreadful, snowless capture conditions, this year provided us exceptional conditions in most parts of the country. Taking full advantage of the snow, Rick and Blake were able to put up some tremendous capture records. Rick and his crew were able to net gun an amazing 31 Elk in a single day. While Blake and his crew were able to put up an all time Colorado record of 55 deer in a day. In addition to all sorts of high efficiency records, biologists are still boasting incredibly low capture mortality rates.

Pilot Rick Swisher with a moose out of Choteau Montana.

Net gunner Jayce Clark prepares to release a very small 30-pound fawn.

A Typical Colorado landing scene with Blake and Rick stacking deer up fast on the largest Deer project in North America.

Pilot Blake Malo comforting a moose calf in the Wasatch Mtns. Utah.

Sheep, moose, deer, wolves, bison, goats, owls, coyotes, pronghorn, elk, wolverine, musk ox, bears, and caribou.....By chemical immobilization or the net, we have caught them all. There is simply no other U.S. company that captures and takes biological samples on the variety of natural wildlife species that Quicksilver does on a regular basis and YEAR ROUND.

A large Plains Bison bull collared by Quicksilver Air's Crew

Blake holding a coyote that was just netted.

Up and coming capture pilot Mark Stott played an integral roll in this season's captures. Mark continues to demonstrate his quality flying abilities while already generating demand from multiple biologists. Mark is currently working on a calf mortality study in Western Alaska for the Alaska Department of Fish and Game.

Pilot Mark Stott bags up an Antelope On a capture in Texas

A perfectly placed shot, this Moose will soon be yet another animal captured

We wish we had room for pictures from all projects. Thanks to everyone for your business. Looking forward to working with our loyal lower 48 clients again.

Best Regards,

**Rick and Sharon Swisher & the Quicksilver Crew

Net Gunner Wes Livingston teaches Jonathan Lewis, a young and promising biologist, how to take samples on this ewe in the Rocky Mountains

Carotid Artery worms (Elaephora Schneideri) can block the vessels in moose ears and cause them to freeze off. These are just one of many deadly parasites Quicksilver's crews check wildlife for.
